KF Unternehmensgruppe

Preserving  
**RESOURCES.**

*“Together we are committed to  
pure water, clean soil and fresh air  
so that our children can experience  
a healthy nature.”*

Erik Jahn, Managing Director of the KF Corporate Group

## KF Corporate Group

With more than 75 years of experience, our joint group of companies offers comprehensive expertise and state-of-the-art technologies for the elimination of environmental pollution in water, soil, and air.

As a strong and reliable partner, we guarantee individual and sustainable solutions for the public, industrial and private sectors, from project planning through commissioning to maintenance.

Our interdisciplinary team consists of approximately 400 employees in the areas of project development, engineering, electrical engineering and installation, who realize our projects in Germany and worldwide.

Drinking water treatment

Process water treatment

Industrial wastewater treatment, water recycling and ZLD

Municipal wastewater treatment and sludge digestion

Arsenic and fluoride removal

# Pure water for a healthy life

Access to clean water cannot be taken for granted. To ensure that people can enjoy pure water today and in the future, we offer a wide range of technical processes.

Our customers benefit from extensive manufacturing capacities in plant construction at numerous locations - throughout Germany and beyond.

Our portfolio includes the planning, design and construction of tailor-made, customer-specific systems. In addition, we offer the conversion, expansion and modernization, as well as the maintenance and servicing of the control systems of existing plants.

Drinking water treatment

Municipal wastewater treatment and sludge digestion

Process water treatment

Industrial wastewater treatment, water recycling and ZLD

Ground- and lake water remediation

Arsenic and fluoride removal

Certified laboratory

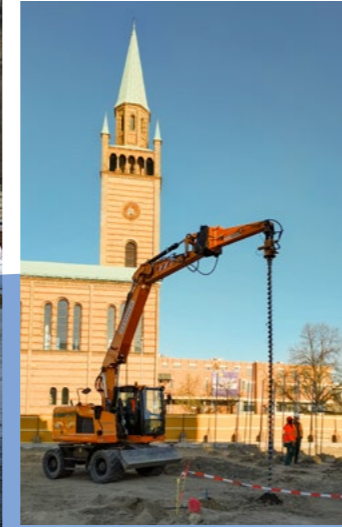

Car washing treatment plants

Water treatment for aquaristics

Subsoil exploration and contaminated site remediation

Well construction and borehole exploration

Soil washing plant for cleaning polluted soils and construction wastes

Ammunition clearance and disposal

# Clean soil for a sustainable basis

Clean and resilient soil is a valuable raw material. To ensure this, we have specialized in the investigation and remediation of contaminated sites.

We also offer a variety of mechanical, physical, and chemical processes to remediate contaminated soils. We treat the soils efficiently and in a resource-conserving manner – from preparation to washing to disposal.

Subsoil exploration and contaminated site remediation

Well construction and borehole exploration

Soil washing plant for cleaning polluted soils and construction wastes

Ammunition clearance and disposal

Exhaust air treatment  
and odor elimination

# Fresh air for a high life quality

For the elimination of unpleasant odors, exhaust air treatment, odor control and to ensure compliance with emission regulations and occupational safety standards, we provide customized solutions based on the latest state of the art. For example, for wastewater treatment plants and odor-intensive industries.

Exhaust air treatment and odor elimination

ROWA Carbon

HAPaqua filter material

GEH® adsorption material

# Our products for reliable water treatment

In addition to designing water purification plants we produce and distribute certified products for the filtration and adsorption of impurities. We reliably remove fluoride and arsenic, heavy metals or phosphates, bacteria and viruses.

GEH® – the world's leading product for the adsorption of arsenic in drinking water production

HAPaqua – the removal of fluoride from freshwater sources

ROWA product range – treatment and optimization of aquarium water for household use as well as for zoos and zoological shops
